

**SCORING AND INTERPRETATION:
THE MODIFIED ERICKSON SCALE OF COMMUNICATION ATTITUDES**

I. Answers: Score one point for each answer that matches the following. Then sum the scores.

- | | | | |
|----------|-----------|-----------|-----------|
| 1. False | 7. False | 13. False | 19. False |
| 2. False | 8. False | 14. True | 20. True |
| 3. False | 9. True | 15. False | 21. True |
| 4. True | 10. True | 16. True | 22. False |
| 5. True | 11. False | 17. False | 23. True |
| 6. True | 12. False | 18. True | 24. True |

II. Adult Norms (Andrews and Cutler, 1994). Compare the scores obtained for the client relative to scores obtained from adults who stutter and those who do not stutter. This indicates whether the attitudes about communication (not attitudes about stuttering per se) are more like those of adults who stutter versus those who do not.

	<u>Mean</u>	<u>Range</u>
Stutterers	19.22	9-24
Non-Stutterers	9.14	1-21
